

Display the most current Release Preference poster in your shop and direct the skier to use it. This is an important part of the system adjustment process and makes the skier an active participant in the adjustment process.

Please note:

- Release Preference is NOT the same as Skier Ability
- Determining Release Preference is the skier's responsibility

# RELEASE PREFERENCE

## Determining Your Release Preference is Your Responsibility

Your Release Preference, height, weight, age, and boot sole length are used by the shop technician to determine the release/retention settings for your bindings. Consult these descriptions to select your Release Preference. This information may affect your risk of injury. Be sure to provide accurate information.

	<b>SKIERS NOT DESIGNATED I OR III.</b>	
<b>I</b>	<b>II</b>	<b>III</b>
<b>SKIERS WHO ARE UNCERTAIN OF THEIR PREFERENCE</b>	<b>MOST SKIERS ARE SATISFIED WITH A (II) SETTING</b>	<b>THIS CORRESPONDS TO DECREASED RISK OF INADVERTENT BINDING RELEASE AND INCREASED RISK OF NON-RELEASE.</b>
Skiers who designate themselves as (I) receive <b>lower than average ski binding release settings</b> . This corresponds to easier ski binding release in a fall. Recommended for entry-level skiers.	Skiers who designate themselves as (II) receive average ski binding release settings appropriate for most recreational skiing.	Skiers who designate themselves as (III) receive <b>higher than average ski binding release settings</b> . This designation is not recommended for skiers 47 lbs. (21 kg) and under.

If from experience, you have been dissatisfied with the release/retention settings that result from your release preference, mention this to your binding technician.
